

To whom it may concern,

This letter is regarding oral surgery treatment for my patient, LAKSHMI MADALA (DOB: 12/10/93). Lakshmi reported to my practice for an initial patient exam with a chief complaint of "wisdom teeth pain." Full mouth x-rays and a panoramic x-ray were taken, as well as intraoral photos. The teeth presented without decay; however, they are only partially erupted and soft tissue covers half of the coronal tooth structure. A radiolucency can be seen encircling tooth on the panoramic x-ray. It is my recommendation that all 4 wisdom teeth are extracted under full sedation to avoid any permanent damage as well as avoid potential infections, as these teeth cannot be properly treated in their current configuration. In lieu of her condition, she needs support from her husband during the surgery and recovery process.

Thank you,

Dr. Taj Ibrik, DDS
